The company developed AutoCAD as a replacement for the early CAD programs like the Data Designers' Systems (DDS) and Job Order Entry (JOE). AutoCAD was originally designed by Paul Glavich and Martin Newell, who started working on the product on July 7, 1979. In an interview with University of Colorado at Boulder's publication Techskeptic, Glavich said: It took about a month to get AutoCAD to where I thought it was ready to be demonstrated, so I wrote a 15 page report to Paul Newell about it on September 17, 1979 and then we demonstrated it to the mainframes at Burlington [Electronics], who had the contract with Northbrook. We didn't show it to anybody else until the following September. So, we kept it secret for about 6 months, but by then we had two people and it was much more sophisticated than just job scheduling. The development team took their name from a term used in the U.S. Postal Service for the addguarters is located at Number One Geneva Place in Geneva, Switzerland. However, in an interview with The CAD Forum, Glavich said that the name AutoCAD I.0 was released in December of that year. Its price was around \$2,000, which was a term he came up with for the word "Auto". AutoCAD 1.0 was released in December of that year. Layout is the process of creating the two-dimensional model of a building or design. It consists of two steps: Drawing layout. Editing, including final editing, is a post-layout step that can modify the file's content and properties, for example to add or remove components, to adjust the drawing's orientation, to change the scale, to add annotation, to split a drawing into several drawings, to remove drawing objects or to add comments. History AutoCAD was originally released as a stand-alone drawing program in 1982. As it became a de facto standard for 2D drafting, its functionality was built into successive releases of AutoCAD, starting with AutoCAD 2, the first major revision of AutoCAD to include parametric and feature-based modelling. The second major release, AutoCAD 3 in 1987, introduced other geometric drafting commands and extended its capabilities as a CAD system. AutoCAD 2.5 in 1990 extended its functionality further and added support for the graphic interface. In 1992, AutoCAD 95 was released and provided many improvements to AutoCAD 95 also introduced support for the rendering of parametric and feature-based modelling. AutoCAD 95 also introduced support for external DLLs, improved RIP technology and Microsoft Windows NT support. Starting in 1992, AutoCAD 3.0 and AutoCAD 3.1 used a double-buffering scheme to improve speed, and this vas ported to AutoCAD 91 in 1998, AutoCAD 2000. It added support for GDI+'s direct rendering, hence dimined for all CAD applications. In 2004, introduced the DWG (Drawing) file format, a versalle and portable for all CAD applications. In 2007, AutoCAD 2009 introduced a new, simplified model format, called MMF, which was also used in AutoCAD 2009 and AutoCAD 2009 and AutoCAD 2009 introduced an new, simplified models of protes of creating models, allowing users to create models at a quicker speed.
