Any images you export from Photoshop need to be saved in a format that Adobe's AI engines are optimized for. There's no "export for any and all AI engines" option. In many cases, there isn't even an option to find out what engine is being used. That's not acceptable. Adobe's photo-booking has traditionally been a time sink. AppleFotoBook runs very smoothly, and you can just choose your template or license before you begin the process. Crack it open, and you have a pretty good idea of everything you need to take into account for a true one-click book. True, that limits the size of your project to a maximum of 3200x2400 pixels, but it's a solid joining of simplicity and power. While we don't have a full list of "them and us" camera apps, we do know that Nikon's D-Preview, Olympus' Pop App, and Adobe's Lightroom are the only major full-featured camera apps you can use to backup your JPEG files to the web. No other major vendor offers a direct connectivity solution. The user interface is fairly similar to what users are used to these days, though the general layout and the tools are somewhat tweaked to accommodate iCloud document sharing, as well as the new, tablet-optimized interface. The toolbar looks a bit different than it did before the upgrade. However, it's still easier to navigate for most users. The Application bar at the bottom is similar, as are the main functions performed, although they are unsurprisingly

tweaked for an iPad audience. The screen doesn't run as smoothly, however, and some interface details—such as QuickMask—are not as smooth. The real reason, I suspect, is iCloud, since they seem to make use of the same APIs as iOS. I have, thus far, not experienced any serious issues with the OS itself, but I find myself frequently hitting the home button on the iPad to go to my main apps. Sometimes, with larger applications (iPad Pro Pages, Lightroom 5) the apps don't seem to be able to handle everything, because I'm back on my main Home screen. Depending on how hard the user is on the keyboard, this represents a serious drawback, one that Adobe Studios needs to iron out.
