The new iPad and software combination offers a powerful way to get out of your "rut," to apply creative energy to your own work (or to critique someone else's) and share it. I've had the opportunity to try out the Photoshop Sketch on my own work on the iPad Pro, and my designers and clients have used the app as well. Let's face it: This is a case in which the iPad and the iPad Pro are perfect for the task. Although the iPad is an informal sketchpad for artists and designers, designers, in particular, should consider using Photoshop Sketch and the larger iPad. Although Adobe Photoshop is still often referred to as a "photoshop," the software actually is used to enhance photographic images, and it's thus a great fit for the iPad Pro, which has an Apple-designed True Tone display. The iPad Pro's screen is more reflective and colorful than an iPhone or other smartphone, providing a more three-dimensional feel. Anyway, I thought I'd do a quick roundup of what's new in Lightroom 5, and how it could be used effectively. First of all, Lightroom 5 has been rewritten in the verbiage of C++, meaning it is scalable. This is something that has been the holy grail of things like Google+, Facebook, Twitter, and many other platforms, and I'm pleased to see Adobe have finally caught up with them. It's best considered a desktop alternative to its Aperture sibling, though in terms of features it may leave most users cold. The only real advantage to having both is that you can switch your library through the Aperture interface, and you can transfer all metadata, keywords, and catalog information between both apps.
